Week 2: Connecting the Database

ASSIGNMENT

DUE DATE 2/6/2026, 3:45:00 PM EST

In this assignment, you will extend the app you deployed in Assignment #1 so that it reads data from Supabase and renders it on a list page, then redeploys to Vercel.

1. Continue from your existing GitHub repository. Use the same Next.js app you created in Assignment #1.

2. Connect your app to Supabase. Store your Supabase URL and anon key in environment variables (do not hardcode them).

Supabase anon key:

```
eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpc3MiOiJzdXBhYmFzZSIsInJlZiI6InFpaHNnbmZqcW1ram1vb3d5ZmJuIiwicm9sZSI6ImFub24iLCJpYXQiOjE3NDk1Mjc0MDAsImV4cCI6MjA2NTEwMzQwMH0.c9UQS_o2bRygKOEdnuRx7x7PeS-f_OUGDtf9l3fMqMSQ
```

Supabase project ID:

```
qihsgnfjqmkjmoowyfbn
```

3. Read from a pre-existing Supabase table of your choice (do not create a new table). Fetch rows from the table.

4. Render a list page. Display the rows returned from Supabase in a list, table, or card format.

5. Commit and push your changes to GitHub. Deploy the changes to Vercel.

6. Turn off Vercel “deployment protection” so that you can view your page in Incognito Mode.

7. Submit the commit-specific URL of your Vercel app in the “Submissions” section.

Don’t forget to complete your Humor Study at **humorstudy.org** for the week!
