Week 3: Auth Week

ASSIGNMENT

DUE DATE **2/16/2026, 11:59:00 PM EST**

Required viewing: **https://youtu.be/996OiexHze0?si=AKZX3uSA8TgESCx2**

Extend your app from assignment #2. Update it so that it protects a given route and shows a gated UI.

Here's our Google OAuth Client ID:

```
388960353527-
fh4grc6mla425lg0e3g1hh67omtrdihd.apps.googleusercontent.com
```

The assignment can/should be done without a Google Client Secret.

Be sure that your redirect URI is /auth/callback in your application.

Make sure you are redirecting to /auth/callback, not any other route with any other query parameters.

I suggest using the following NodeJS packages:

- @supabase/ssr (server/browser auth client wiring)
- @supabase/supabase-js (Auth API calls)

Note: Please do not update/enable/disable any RLS policies in Supabase.

Turn off Vercel “deployment protection” so that you can view your page in Incognito Mode.

Submit the commit-specific URL of your Vercel app in the “Submissions” section.

Don’t forget to complete your Humor Study at **humorstudy.org** for the week!
