Week 5: Making REST API Calls

ASSIGNMENT

DUE DATE 3/1/2026, 11:55:00 PM EST

Iterate on your application from assignment #4.

In this assignment you will get your app to upload images and show resulting captions. This will be done by sending POST request to our staging REST API: **https://api.almostcrackd.ai**.

How to Call the Caption Pipeline API

Use this base URL for all API calls: `https://api.almostcrackd.ai`

You will make requests in this order:

1. Generate a presigned upload URL
2. Upload image bytes to that presigned URL
3. Register the uploaded image URL with the pipeline
4. Generate captions from the registered image

Requirements

- A valid JWT access token
- Include auth header on API routes:
  - `Authorization: Bearer <your-token>`

- Supported image content types:
  - `image/jpeg`, `image/jpg`, `image/png`, `image/webp`, `image/gif`, `image/heic`

Step 1: Generate Presigned URL

Request

`POST https://api.almostcrackd.ai/pipeline/generate-presigned-url`

Headers:

```
Authorization: Bearer <your-token>
Content-Type: application/json
```

Body:

```
{
  "contentType": "image/jpeg"
}
```

Response

```
{
  "presignedUrl": "https://....",
  "cdnUrl": "https://presigned-url-uploads.almostcrackd.ai/<userId>/<filename>.jpg"
}
```

- `presignedUrl`: direct upload target (S3 signed URL)
- `cdnUrl`: public URL of the uploaded image (used in Step 3)

Step 2: Upload Image Bytes to `presignedUrl`

This is a `PUT` request directly to the returned `presignedUrl` (not to `api.almost-crackd.ai`).

```
await fetch(presignedUrl, {
  method: "PUT",
  headers: {
    "Content-Type": file.type
  },
  body: file
});
```

Important: `Content-Type` should match what you sent in Step 1.

Step 3: Register Image URL in the Pipeline

Request

`POST https://api.almostcrackd.ai/pipeline/upload-image-from-url`

Headers:

```
Authorization: Bearer <your-token>
Content-Type: application/json
```

Body:

```
{
  "imageUrl": "<cdnUrl from Step 1>",
  "isCommonUse": false
}
```

Response

```
{
  "imageId": "uuid-value",
  "now": 1738690000000
}
```

Save `imageId` for the caption step.

Step 4: Generate Captions

Request

`POST https://api.almostcrackd.ai/pipeline/generate-captions`

Headers:

```
Authorization: Bearer <your-token>
Content-Type: application/json
```

Body:

```
{
  "imageId": "uuid-value-from-step-3"
}
```

Response

Returns an array of caption records generated and saved by the system.

Turn off Vercel “deployment protection” so that you can view your page in Incognito Mode.

Submit the commit-specific URL of your Vercel app in the “Submissions” section.

Don’t forget to do your humor study for the week!
